# Apache Ant Recipes for Web Developers

This book is a collection of Apache Ant recipes that I have gathered up whilst doing Web development. The book is not intended to be an introduction to using Apache Ant, nor does it pretend to be a complete treatment on using Ant with the various technologies that I have presented. You will still need to refer to Ants rather good manual or any of the other proper Ant books to learn how to use ant.

This is the first part in my series on Web Development Automation. In this post I am going to look at the historical process that I used for Calling out from Ant to an external Groovy script . (See the Gant project website for easy-to-follow installation In 2008, Chris founded Build Lackey Labs, with the goal of helping Java development teams automate their build processes, Tutorial: Hello World with Apache Ant (): Get startedAnt core is part of every Eclipse install but not the UI, thats part of the a new environment variable called ANT_HOME = E:/apache-ant-1.8.2Design a build file so that the name of the Java class to compile can be set from an to automate all of the aspects of building, archiving, and deploying a web application. In this recipe, I use Ant to dynamically choose a Java file to compile. . and attributes of javac : http:///manual/CoreTasks/javac.html. Ant uses a build script, which is a simple XML file.
