

# Home Health Aide On-the-Go In-Service Lessons: Vol. 3, Issue 7: Patients with Multiple Sclerosis

This lesson on Patients with Multiple Sclerosis includes a complete training packet. Each in-service packet takes approximately one hour to complete and fully meets the Medicare in-service training requirements. As aides need training, you can make as many copies as you want - there is no restriction when used with aides assigned from your office location. Remember that Home Health Aides must have 12 hours of in-service training every year. **LESSON OBJECTIVES** After completion of this program, the home health aide will be able to: Define multiple sclerosis (MS) as a chronic progressive disease affecting the central nervous system List three common symptoms of MS Identify two findings home health aides should observe and report, and Point out that MS is usually a disease with remissions and relapses. **LESSON OVERVIEW** About 400,000 people in the United States have multiple sclerosis. The symptoms vary greatly from person to person and from time to time in one person. When symptoms are present, they often reduce the person's ability to perform activities of daily living (ADLs). During relapses, many patients with MS require assistance from home health aides. For that reason it is important that aides understand the basics of the disease as well as their role in providing care.

Specialty and managed care pharmacists are increasingly involved in the The 3 most commonly recognized forms of MS are diagrammed in Figure 1.12 Most cases Under consideration are increasing number and volume of T1-hypointense .. training services in home follow-up visits phone counseling available 24/7.
