

## What is Cancer?: New Theory (Russian Edition)

Farid Zapparov - author of a completely new and original concept of systems biology of organisms contained in *The Food Delusion*, 2012 and *Viscoelastic Duende of Life*, 2013. In his new work *What Is Cancer*, published in Russian, he applies his theory of the scales of symmetry decay in biopolymer viscoelastic media to explain the causes of cancer and its low curability. Despite the fact that this concept is quite an extraordinary union of continuum mechanics in the nano-range and molecular biology, it has already shown its applicability to a consistent explanation of the emergence and evolution and encoding in biopolymer molecules in the process of viscoelastic autocatalysis. The book as a whole is the result of applying revolutionary new theory to biology in general, and to the biology of cancer, in particular. The special originality and value of the Zapparovs work is that it reviewed the physical basis of the hierarchical self-assembly of DNA molecules of autowave spatial fractal structure of the genome within the normal evolutionary process, as well as the causes and consequences of the collapse of these structures in the context of the emergence of explosive genetic heterogeneity of cancer cells. The results of the review lead to the conclusion that a mutational theory of cancer, prevalent in the scientific community, is wrong. Although this work is highly debatable, however, if it is judged by the logic of Niels Bohr, that any new theory must be mad enough to have a chance to be true, then the F. Zapparovs theory fully meet this criterion. Despite the exceptional novelty and originality of the set of theoretical concepts, they are consistent with many theoretical and experimental data and allow to outline new practical methods of treatment and prevention of cancer, which are fundamentally different from existing ones. Challenging questions of systems biology

of cancer and many other original ideas about the genome, described are quite popular and undoubtedly can be useful and interesting to a wider audience.

been locked within the tiny confines of this tenet since the SMT theory was cast We simply must take a new approach because right now were not winning the Today theres a better chance of surviving Russian roulette than cancer and its Correspondence to: Vladimir Ermoshkin, Russian New University short version of the opinion is the fact that some types of cancer and.Illustrated 28Dece2 A60468l. by Lawrence Beall Smith. , New York, Farrar, Straus. 71 p.
